Source: Adapted from Lambert, WC, Everett MA: The nosology of parapsoriasis. *J Am Acad Dermatol* 1981; 5:373–395.

[a] Some authorities consider large-plaque and small-plaque parapsoriasis as a single entity, usually termed *parapsoriasis en plaques*.

[b] The term *Brocq's disease* is sometimes utilized to denote small- and large-plaque parapsoriasis together as a single entity; less commonly it is used to denote one or more of the other parapsoriases.

[c] Preferred synonyms, based on frequent usage.

[d] "Parapsoriasis en plaques" is pronounced with the final "s" silent, misleading some English-speaking authors to misspell it "parapsoriasis en plaque."

[e] These terms are frequently used by different authors to denote completely different diseases. For this reason, their use is not recommended.

[f] Poikiloderma vasculare atrophicans is sometimes labeled poikiloderma atrophicans vasculare. Either term is acceptable.

[g] When equivalent terms in different languages are in common use, only the Latin name is given: e.g., parapsoriasis guttata (guttate parapsoriasis, parapsoriasis en gouttes, or en gotas); parapsoriasis lichenoides (lichenoid parapsoriasis, parapsoriasis lichenoides); parapsoriasis variegata (variegate parapsoriasis).

[h] Some authorities regard retiform parapsoriasis as a separate entity.

[i] Some authors regard digitate dermatosis, of which fingerprint parapsoriasis is a synonym and xanthoerythrodermia perstans a variant, as a separate entity.

[j] Xanthoerythrodermia perstans is a variant of digitate dermatosis in which the lesions are yellow in color and on clinical examination. It sometimes incorrectly applied to other forms of parapsoriasis with yellow lesions.

[k] Xanthoerythrodermia perstans is an unnecessary term that should be avoided.

[l] Some authors consider acute and chronic pityriasis lichenoides as separate entities.
